

ContiCooker

Pet food: Super Premium Chunks in Gravy

-ADVANCED INLINE COOKING TECHNOLOGY

A new cooking technology for manufacturing super premium chunks in gravy and snacks with a continuous production flow.

- Texturized chunks
- Snack products
- Plant based products

scansteel foodtech further processing – where innovation meets excellence in pet food production.

We specialize in pioneering next-generation solutions for cooking and structuring high-quality pet food products.

The **ContiCooker** is a state-of-the-art system, designed for manufacturing of cooked meat raw materials, creating texture and fibers in the finished super premium product. All species can be used with functional protein as well as hybrid, plant-based ingredients, among others. What sets the ContiCooker's advanced inline cooking technology apart is our controlled heating system, where we can offer precise temperature control, which controls the manufacturing process, improves consistent quality, energy-efficient, cost effective and optimized production flow, unlike traditional steam-based technologies found in the industry.

🎯 **With the ContiCooker, we help manufacturers to meet the evolving demands, so that the products can meet the highest industry quality standards.**

APPLICATION EXAMPLES

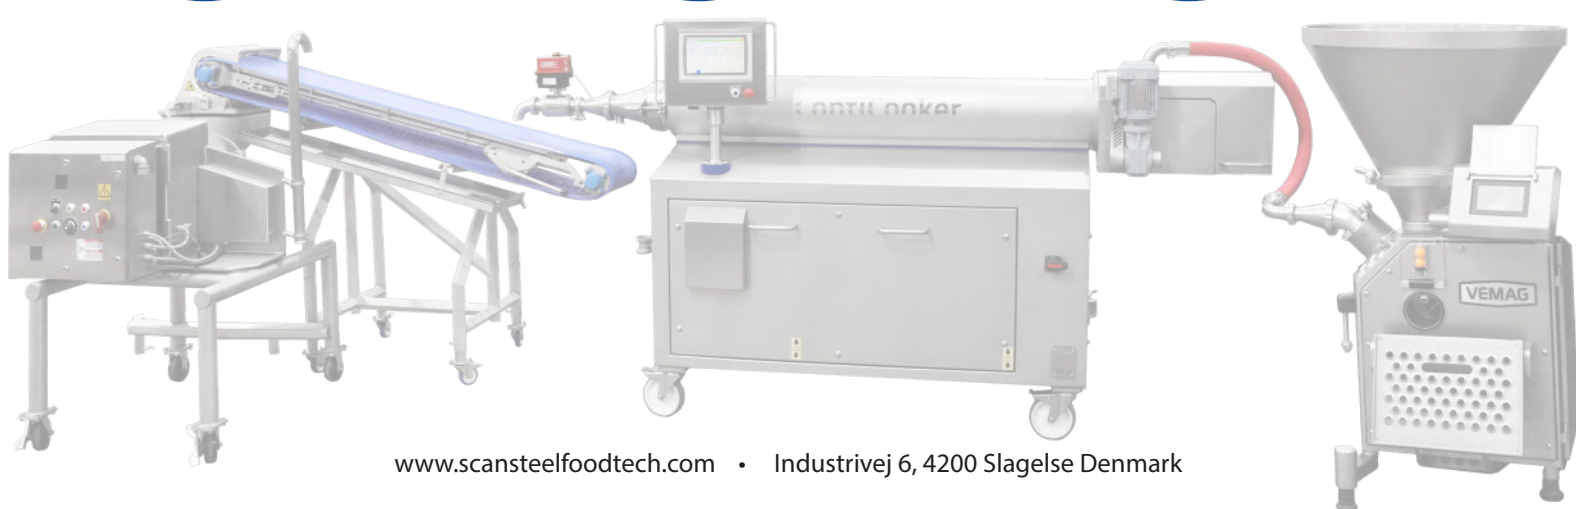

Super Premium Chunks with vegetables

Super Premium Chunks in gravy

Snack dried / Snack semi-moist
